About Bamboo System Technology

Before paper was invented, bamboo was used in ancient China as paper, and it was the key media for knowledge recording and sharing. It has inspired Bamboo System Technology to build a cloud-based online learning platform, where the environment adapts to the learners, and the new digital media platform allows people to learn, create and share knowledge anytime and anywhere.

Bamboo System Technology is an internet education technology enterprise headquartered in Singapore, dedicated to becoming a leading solution provider of global internet education technology and smart education platform. The core product, BambooCloud, is a cloud-based next generation learning management platform that developed based on the latest internet and cloud computing technology. It has been deployed successfully helping enterprises, schools and universities, SMEs to build an integrated and easily scalable learning ecosystem; creating innovative, engaging and personalized online learning experiences.
