The school of the future must be beyond the walls and classrooms. Future learning will be beyond country borders. UBER does not have a single taxi and it is the world's largest taxi company. Airbnb does not have a single room and it is the world's largest hotelier. The biggest and most successful school in the future will be the online educator who does not have a classroom of its own.

About Bamboo System Technology

In ancient China before paper was invented, bamboo was used as paper which is the key media for knowledge recording and sharing among people. Nowadays Bamboo system technology likes to build the online platform as the new media and way for people to learn, create and share the knowledge anywhere and anytime.
